

## Lab. 9

```
class myThreadone extends Thread {  
    public void run() {  
        try {  
            Thread.sleep(10000);  
            System.out.println("B.M.S College of Engineering");  
        }  
        catch (InterruptedException e) {  
            System.out.println("Interrupted: " + e);  
        }  
    }  
}
```

```
class myThreadtwo extends Thread {  
    public void run() {  
        try {  
            Thread.sleep(2000);  
            System.out.println("CSE");  
        }  
        catch (InterruptedException e) {  
            System.out.println("Interrupted: " + e);  
        }  
    }  
}
```

```
class main {  
    public static void main (String args[]) {  
        myThreadone T1 = new myThreadone();  
        myThreadtwo T2 = new myThreadtwo();  
        T1.start();  
        T2.start();  
    }  
}
```

**/\* Write a program which creates two Threads, one Threads displaying "bms college of engg." once every ten seconds and another displaying "cse" once every two seconds\*/**

```
class myThreadone extends Thread {  
    public void run(){  
        try {  
            Thread.sleep(10000);  
            System.out.println("BMS COLLEGE OF ENGINEERING");  
        }  
        catch (InterruptedException e){  
            System.out.println("Interrupted exception " + e);  
        }  
    }
